Report Overview

A Round Head Rivet is a type of fastening device used to join or secure two or more materials together, typically in a permanent or semi-permanent manner. It is characterized by its rounded head, which sits flush with the surface of the materials being joined, providing a smooth and aesthetically pleasing appearance. The rivet consists of a shaft with a head on one end and a tail on the other. To install a round head rivet, a hole is drilled or punched through the materials to be joined, and the rivet is inserted through the hole. The tail is then pulled and deformed, creating a secure connection between the materials. Round head rivets are commonly used in various industries, including automotive, aerospace, and construction, where a strong and visually unobtrusive connection is required.
