Report Overview

Robotic Process Automation (RPA) is a technology-driven approach that involves the use of software robots or "bots" to automate repetitive, rule-based tasks typically performed by humans. RPA bots can mimic human actions such as data entry, data manipulation, and data transfer across different applications and systems, thereby increasing efficiency, accuracy, and speed. Hyperautomation, on the other hand, is an advanced extension of RPA that employs a combination of technologies including artificial intelligence (AI), machine learning (ML), and process mining to automate processes more intelligently and comprehensively. Hyperautomation not only automates repetitive tasks but also enhances decision-making capabilities and process optimization by leveraging advanced analytics and cognitive technologies. This approach aims to achieve a higher level of automation maturity, where systems can autonomously identify, analyze, and execute tasks with minimal human intervention, leading to improved productivity and business agility.

This report provides a deep insight into the global RPA and Hyperautomation market covering all its essential aspects.
