Report Overview

Rubber Antioxidant MB (2-Mercaptobenzimidazole) is a widely used antioxidant in the rubber industry, primarily functioning to prevent oxidative degradation and extend the lifespan of rubber products by inhibiting chain scission and cross-linking caused by heat, oxygen, and ozone exposure. It is particularly effective in natural rubber, synthetic rubber (such as SBR and NBR), and latex applications, providing excellent resistance to aging and fatigue. The market for Rubber Antioxidant MB is driven by the growing demand for durable rubber products across automotive, industrial, and consumer goods sectors, particularly in tire manufacturing, hoses, seals, and conveyor belts. Increasing automotive production, especially in emerging economies, along with stringent regulations on product longevity and environmental sustainability, further fuels demand. However, volatility in raw material prices and competition from alternative antioxidants, such as phenolic and amine-based compounds, pose challenges. Asia-Pacific dominates the market due to robust rubber production in China, India, and Southeast Asia, while North America and Europe focus on high-performance rubber applications with strict quality standards. Innovations in eco-friendly antioxidants and the shift towards sustainable rubber processing are expected to shape future growth.
