Abstracts

Portable aerosol fire extinguishers are used to extinguish fires by producing hot aerosol fire extinguishing agents through oxidation-reduction reactions. They are usually stored in solid form. After startup, the aerosol fire extinguishing agent undergoes an oxidation-reduction reaction, releasing a large amount of gas and free radicals. These gas and free radical particles react with O[·], H[·], HO[·] free radicals that maintain combustion, cutting off the chain reaction of combustion, and producing a large amount of gas to suffocate the flame, achieving a combination of chemical and physical fire extinguishing effects; Portable aerosol fire extinguishers are compact in size, pressure free for storage, and have a wide range of fire extinguishing capabilities. They are particularly suitable for wearing in various places such as homes, vehicles, shopping malls, hotels, kitchens, archives, libraries, computer rooms, schools, offices, and police stations.

The global S Type Portable Aerosol Fire Extinguishing market size was estimated at USD 125.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
