Report Overview

Salt bath heaters are industrial heating systems designed to provide uniform and controlled heat for various applications, particularly in the metalworking and heat treatment industries. These heaters utilize a molten salt mixture as the heat transfer medium, which is heated and circulated within a closed-loop system. The molten salt, typically a mixture of sodium nitrate and potassium nitrate, has a high heat capacity and can maintain a stable temperature, making it ideal for precise heating processes. Salt bath heaters are commonly used for applications such as hardening, tempering, stress relieving, and annealing of metals, as well as for cleaning and surface treatment processes. They offer advantages such as energy efficiency, consistent temperature control, and reduced risk of oxidation compared to traditional gas or electric furnaces.
