### Report Overview

Salt chlorination equipment refers to a system designed to generate chlorine for water disinfection purposes by dissolving salt (sodium chloride) in water. This process, known as electrolysis, involves passing an electric current through a saltwater solution, which then produces chlorine gas. The chlorine gas is then dissolved back into the water to create a chlorine solution used for sanitizing pools, spas, and other water bodies. The equipment typically consists of a control unit, a cell containing the saltwater solution, and a means of distributing the generated chlorine into the water. This method is an alternative to using traditional chlorine chemicals, offering a more environmentally friendly and cost-effective solution for maintaining water quality and safety.
