Abstracts

Airlaid paper is a textile-like material categorized as a nonwoven fabric made from fluff pulp. Compared with normal wet-laid paper and tissue, air-laid paper is very bulky, porous and soft. It has good water absorption properties and is much stronger compared with normal tissue. There has been a global increase in awareness regarding women's health and hygiene, particularly menstrual health, as a result of educational campaigns by governments, NGOs, and healthcare organizations. This has led to a greater acceptance and use of feminine hygiene products, especially in developing markets where menstrual hygiene was previously a taboo subject. Increasing awareness of the health risks associated with poor menstrual hygiene (such as infections) is driving demand for more reliable and effective feminine hygiene products, such as sanitary pads, tampons, menstrual cups, and panty liners. In addition, countries in Asia-Pacific, Africa, and Latin America are witnessing higher birth rates compared to developed regions, contributing to an increased demand for baby diapers. For example, countries like India, Indonesia, Nigeria, and Brazil are seeing growing populations, leading to a higher consumption of baby care products, including diapers. Besides, the increasing elderly population in developed regions such as North America, Europe, and Japan is a major driver for the adult diaper segment. Conditions such as incontinence, coupled with rising life expectancy, are leading to higher consumption of adult diapers, particularly in countries with aging populations. The diaper market is being driven by a combination of demographic trends, increased hygiene awareness, convenience demands, sustainability concerns, and innovations in technology and product performance. The continuous sanitary products growing market promotes the demand of airlaid paper accordingly.

The global Sanitary Products Airlaid Paper market size was estimated at USD 931.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

3.70% during the forecast period.
