Report Overview

SCR Denitrification Technology refers to a selective catalytic reduction (SCR) process designed for the removal of nitrogen oxides (NO_x) from exhaust gases, particularly in industrial and automotive applications. This advanced technology employs a catalyst to facilitate the selective reduction of NO_x into nitrogen (N₂) and water (H₂O) using a reductant, typically ammonia (NH₃) or urea. The SCR process operates at high temperatures, ensuring efficient NO_x reduction while minimizing the formation of secondary pollutants. The technology is crucial for meeting stringent environmental regulations and improving air quality by significantly reducing harmful emissions from various sources, such as power plants, vehicles, and industrial facilities.
