Report Overview

Screen Printing Plastisol Ink is a type of ink commonly used in the screen printing process for various applications, particularly on textiles. It is a thick, opaque, and durable ink made from a blend of PVC (polyvinyl chloride) and phthalates, which gives it a smooth consistency and allows for a wide range of vibrant colors. Plastisol ink is known for its ability to provide a soft hand feel on the printed surface, as it does not contain any water or solvents that could affect the texture of the fabric. It is also valued for its opacity, which enables it to cover dark fabrics effectively without bleeding through. The ink is cured at high temperatures, which allows the PVC particles to fuse together, creating a durable and long-lasting print that is resistant to washing and wear. This makes Plastisol Ink ideal for producing high-quality, long-lasting graphics on a variety of materials, including cotton, polyester, and blends.
