Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Scutellaria Baicalensis Extract competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Scutellaria baicalensis extract is extracted from Scutellaria baicalensis, with its main functional components being baicalin or baicalein. Scutellaria baicalensis extract has the effect of inhibiting skin aging caused by environmental stressors such as photoaging, cigarette smoke, and PM2.5. The main product grade of Scutellaria baicalensis extract is primarily determined by its baicalin content (based on dry weight). The upstream industry mainly includes Scutellaria baicalensis cultivation and supply of authentic medicinal materials, as well as companies supplying extraction solvents such as ethanol and water, excipients, and packaging materials; the downstream industry includes manufacturers of traditional Chinese medicine and prescription granules, health food and dietary supplement brands, skincare and daily chemical companies, and application fields such as animal health and pet nutrition. In 2024, the global market price for Scutellaria baicalensis extract was US\$73/kg, with sales of approximately 992 tons, a global production capacity of 1000-1100 tons, and an industry profit margin of 20-25%. Global Market Development Trends In the pharmaceutical sector, with the advancement of traditional Chinese medicine modernization and the internationalization of botanical drugs, pharmacological research on components such as baicalin and baicalein, focusing on their anti-inflammatory, antiviral, and hepatoprotective effects, is continuously accumulating. This is driving a steady increase in the use of scutellaria extract in prescription traditional Chinese medicines, hospital preparations, and new botanical drugs. The increasing evidence requirements for herbal medicines in Europe, the United States, and Japan are prompting companies to upgrade to standardized, highly traceable pharmacopoeial-

grade products. In the health and beauty sector, scutellaria extract, with its "natural, gentle, antioxidant, and soothing" attributes, is being adopted by more functional health products and skincare brands for formulations targeting immune support, mood relief, and sensitive skin repair. The development of cross-border e-commerce and brand OEM/ODM services is enabling raw materials from production regions such as China and South Korea to enter the European and American markets more quickly, driving increased demand for high-purity flavonoids and complex formulations. The future industry landscape will converge towards an integrated model of "upstream planting bases + standardized production + downstream brand cooperation." GAP cultivation, green solvents, and residue control will become key differentiators; simultaneously, synthetic biology and fermentation production routes for baicalin are expected to partially replace traditional extraction methods, reducing costs and improving batch consistency, further expanding the penetration of scutellaria extract in the global natural products market.

The global Scutellaria Baicalensis Extract market size was estimated at USD 72.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.20% during the forecast period.
