Abstracts

The sealing nail laser welding machine is a kind of equipment specially used for sealing nail laser welding. Laser welding of sealing nails is a high-precision and efficient welding method, which is used to weld sealing nails or sealing pins with the base or base plate to achieve reliable sealing connection. Sealing nails are usually small pins made of metal materials, used to connect and seal two or more components. These components can be made of metal, ceramics, glass and other materials. The laser welding technology of sealing nails can accurately weld the sealing nails and components to form a reliable sealing connection. The sealing nail laser welding machine uses the laser beam to weld the sealing nail and the base or the base plate. Due to the characteristics of non-contact, high energy density and precise focus control, laser welding can achieve accurate welding process while reducing the thermal impact and deformation of materials. This laser welding method can provide high strength welding connection, and has small weld seam and heat affected area. The laser welding machine for sealing nails usually has a high-precision positioning system to ensure the accurate positioning of sealing nails and the accuracy of welding positions. In addition, the equipment is usually equipped with appropriate laser sources and welding parameter control systems to meet the application of different materials and welding requirements. The laser welding machine for sealing nails is widely used in many industries, especially in electronic manufacturing, automobile manufacturing, aerospace, medical equipment and other fields. It is used to manufacture components, devices, or equipment with sealed connections to ensure their sealing and reliability.

The global Sealing Nail Laser Welding Machine market size was estimated at USD 125.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
