Report Overview

The Second Generation High Temperature Superconducting Tape, often abbreviated as 2G HTS Tape, is a cutting-edge material engineered for applications requiring high-performance superconductivity. This tape is characterized by its ability to conduct electricity with zero electrical resistance at significantly higher temperatures compared to traditional superconductors, typically above the boiling point of liquid nitrogen (-196°C). The 2G HTS Tape is manufactured using advanced techniques that integrate high-temperature superconducting materials, such as REBCO (Rare Earth Barium Copper Oxide) or YBCO (Yttrium Barium Copper Oxide), onto a flexible substrate. This allows for the creation of lightweight, compact, and efficient components in various industries, including power transmission, magnetic resonance imaging (MRI), and particle accelerators. The product's superior properties, such as high current density and magnetic field strength, make it a valuable asset in the field of advanced materials science, enabling the development of more efficient and powerful electrical systems.
