Abstracts

Biofertilizers are living microbe-based substances that are applied to soil, plants, and seeds to stimulate growth by providing essential nutrients such as minerals. The biofertilizers are also utilized for the seed treatment and help seeds to disinfect them from seed-borne or soil-borne pathogenic organisms and storage insects. According to the 2022 Statistical Yearbook of the United Nations Agricultural and Food Organization, there are about 866 million people work in agriculture, accounting for more than a quarter of the world's total labor force and creating \$3.6 trillion in added value. According to data, North America was the region with the most fertilizer use in the world in 2021, accounting for 32.6% of the global fertilizer market size. From the perspective of demand, the proportion of micro-fertilizers used in many European countries has reached 45-60%, and the proportion of use in the United States was as high as 60-70%. According to our ?Agriculture Research Center?, the global fertilizer consumption was nearly 200 million tons in 2022. According to the National Bureau of Statistics, the total output value of China's fertilizer manufacturing industry in 2021 was 618.572 billion yuan, with a year-on-year increase of 5.05%. Global fertilizer consumption in 2021 increased by nearly 12 million tons, which compared to 2020.

The global Seed Treatment Biofertilizers market size was estimated at USD 2538.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.20% during the forecast period.
