### Report Overview

Selective Catalytic Reduction (SCR) services involve the provision of systems and solutions designed to reduce nitrogen oxide (NOx) emissions from industrial and automotive exhaust streams by injecting a urea-based reagent (typically diesel exhaust fluid, DEF) into the exhaust gas, which then reacts with NOx over a catalyst to convert it into harmless nitrogen and water. These services encompass system installation, maintenance, reagent supply, and performance optimization, catering to industries such as power generation, marine, heavy-duty transportation, and manufacturing, where stringent environmental regulations necessitate effective emission control. The market is driven by tightening global emission standards, increasing adoption of clean technologies, and the growing demand for retrofitting older engines and plants to comply with environmental mandates, positioning SCR services as a critical component in sustainable industrial and transportation operations.
