Abstracts

The self-disinfecting luminous door handle refers to a door handle that can automatically disinfect the surface and emit light under certain conditions. This door handle automatically turns on the disinfection mode when no one is using it through the built-in ultraviolet LED light, effectively killing bacteria and viruses on the surface of the door handle and reducing the risk of cross infection. At the same time, it also has an LED light-emitting function, which can provide clear guidance and convenience for users at night or in low-light environments. The technical principle of the self-disinfecting luminous door handle is mainly based on ultraviolet LED disinfection technology and LED light-emitting technology. The ultraviolet LED lamp can emit ultraviolet light of a specific wavelength, which has a strong killing effect on bacteria and viruses. When the door handle is not in use, the ultraviolet LED lamp automatically turns on and irradiates the surface of the door handle, achieving a disinfection effect through a certain irradiation time and intensity. At the same time, the LED light-emitting module is responsible for emitting light when needed to provide convenience for users.
