A Self Erecting Crane is a type of heavy lifting equipment used in construction and industrial settings for lifting and moving heavy loads. It is characterized by its ability to assemble and disassemble itself without the need for external assistance, hence the term "self-erecting." This crane features a compact design, allowing it to be transported easily to various job sites. The self-erection process involves the crane using its own hydraulic system to raise and position its mast, which is then secured in place. This capability enables quick setup and teardown, making it a versatile and efficient solution for various construction projects.
