### Report Overview

A self-inflating lifejacket is a type of personal flotation device designed to automatically inflate when submerged in water, providing buoyancy and support to the wearer in case of accidental falls or emergencies in water-based activities. This innovative safety equipment is equipped with a gas cartridge and a CO2 cylinder, which, when activated by water, releases gas to fill the lifejacket's bladder, causing it to expand and provide buoyancy. The self-inflating mechanism eliminates the need for manual inflation, ensuring that even if the wearer is unconscious or unable to inflate the device themselves, they will still receive immediate assistance. These lifejackets are often used in various water sports, boating, and other aquatic activities where quick and reliable flotation is crucial for safety.
