Report Overview

Self-tanning cream is a cosmetic product designed to provide a sunless tan by reacting with the amino acids in the top layer of the skin to temporarily darken its tone, typically using dihydroxyacetone (DHA) as the active ingredient. Unlike traditional tanning methods, it offers a safer alternative to UV exposure, reducing the risk of skin damage and premature aging. The product is available in various formulations, including lotions, mousses, sprays, and gels, catering to different skin types and preferences for gradual or instant results. Its appeal lies in its ability to deliver a natural-looking tan without sun exposure, making it popular among health-conscious consumers and those seeking a year-round bronzed appearance.
