## Abstracts

The semi-automatic turning egg incubator is a type of equipment designed for hatching eggs and keeping them warm, providing the ideal environment for hatching. These incubators are specifically designed to simulate the conditions inside a natural nest, allowing eggs to hatch comfortably and successfully. Semi-automatic turning egg incubators are characterized by their ability to turn eggs automatically using an electric motor. Most models feature an adjustable turning interval, which ensures that all eggs receive the same amount of heat and are turned regularly during the development process. Some models also feature automatic temperature and humidity control to ensure consistent and optimal conditions for the eggs. These incubators are commonly used in the poultry industry for hatching chicken, turkey and duck eggs. They are also popular among hobbyists and small-scale farmers who want to raise their own poultry. The semi-automatic turning egg incubator market is expected to grow due to the increasing demand for poultry products, especially in developing regions worldwide. Additionally, the growth of the sustainable agriculture trend, and emerging market opportunities will also boost the growth of the semi-automatic turning egg incubator market in the coming years.

The global Semi Automatic Turning Egg Incubator market size was estimated at USD 85.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
