Abstracts

Semi-conductive buffer water-blocking tape is a specialized component used in the construction of telecommunications and power cables. It serves a dual purpose in cable design: first, as a semi-conductive layer, it helps to evenly distribute electrical stress within the cable, preventing electrical breakdown. Second, it acts as a water-blocking material, ensuring that moisture or water does not infiltrate the cable core. This tape typically contains conductive particles or materials that enable it to maintain a semi-conductive property while also having water-blocking capabilities. By combining these functions, it contributes to the overall reliability and longevity of cables, particularly in outdoor and challenging environments.

The global Semi Conductive Buffer Water Blocking Tape market size was estimated at USD 325.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
