Report Overview

A semi-dry wetsuit, also known as a semi-dry or 2mm wetsuit, is a type of water sports apparel designed to provide a balance between warmth, flexibility, and buoyancy for users engaging in various aquatic activities such as surfing, kiteboarding, and paddleboarding. Characterized by a thickness of approximately 2mm, these wetsuits are made from neoprene or other water-resistant materials that offer partial insulation, allowing for a degree of water exchange to maintain comfort. Semi-dry wetsuits are designed to be more flexible and lighter than full wetsuits, making them suitable for warmer water temperatures or for those who prefer greater freedom of movement. They typically feature sealed seams and may include zippers or other closures to minimize water ingress, although they do not offer the same level of watertightness as drysuits. The primary purpose of a semi-dry wetsuit is to provide a comfortable barrier between the user and the water, while still allowing for some water circulation to regulate body temperature and enhance the overall experience in the water.
