Abstracts

In a solid state battery, the liquid electrolyte and separator often are replaced by a polymer or ceramic. Semi-solid electric vehicle battery packs are a variation of that, typically composed of a solid, conductive material suspended in a liquid electrolyte to help ease the movement of the lithium ions. Semi-solid electric vehicle battery packs have the strengths of liquid and solid and do not require much change in the conventional battery manufacturing process. Therefore, they can be commercialized faster than solid-state batteries even while they have higher safety than lithium-ion batteries.

The global Semi Solid Electric Vehicle Battery Pack market size was estimated at USD 8500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
