Report Overview

Semiconductor devices based on chiplet technology refer to a new class of integrated circuits that utilize a modular design approach. This technology involves breaking down a complex system-on-chip into smaller, more manageable functional units called chiplets. These chiplets are individually designed, manufactured, and tested before being assembled onto a single package or substrate. This modular approach allows for greater flexibility in design, reduced manufacturing costs, and faster time-to-market by enabling the reuse of existing chiplet designs. Additionally, it can improve the yield rates and performance of semiconductor devices by allowing for specialized chiplets to be optimized for specific functions, such as high-performance computing, artificial intelligence, or power management. The adoption of chiplet technology is expected to revolutionize the semiconductor industry by facilitating innovation, scalability, and customization in a wide range of applications.
