## Abstracts

A pressure sensor is a transducer or instrument that converts an input mechanical pressure in gases or liquids into an electrical output signal. A pressure transducer consists of a pressure-sensitive element that can measure, detect or monitor the pressure being applied and electronic components to convert the information into an electrical output signal. Pressure is defined as the amount of force (exerted by a liquid or gas) applied to a unit of ?area? ( $P=F/A$ ), and the common units of pressure are Pascal (Pa), Bar (bar), N/mm<sup>2</sup> or psi (pounds per square inch). Pressure sensors often utilize piezoresistive technology, as the piezoresistive element changes its electrical resistance proportional to the strain (pressure) experienced.

The global Sensor Pressure Measurement System market size was estimated at USD 1850.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
