## Abstracts

The serial port screen is a programmable LCD display designed to communicate with a microcontroller or computer via a serial port. It typically comprises an LCD display, a controller, one or more serial ports, and the necessary circuit boards. The serial port screen can function as an independent display device or as a controller for other devices. By receiving instructions from the user's microcontroller through the serial port, the screen performs corresponding drawing operations on the LCD display. Its system software drives the hardware components in unison, handling tasks such as parsing, loading, running, and refreshing "project files." It also manages serial port communication, touch screen interactions, data processing, and data storage. Renowned for its versatility and robust functionality, the serial port screen is widely applied across numerous fields, including industrial automation, smart home appliances, transportation systems, data centers, EV charging stations, medical devices, national defense, and shared equipment. In these applications, it facilitates seamless interaction between users and machines by displaying data and processing user commands. Human-computer interaction is a discipline that studies the interaction between humans and computer systems. It focuses on how to design, evaluate and implement computer technology so that it can interact with users effectively, conveniently and intuitively. HCI is not limited to traditional computer interfaces, but also includes various ways of interaction between humans and smart devices, such as smartphones, virtual reality (VR), augmented reality (AR), voice assistants, eye control and brain-computer interfaces. The core goal of human-computer interaction is to enhance user experience and ensure a good fit between technology and human needs and behaviors. The wide application of human-computer interaction technology in consumer electronics, medical care, education and other industries has promoted the rapid development of the industry. With the acceleration of digitalization and intelligentization, more industries have begun to explore the application potential of

human-computer interaction technology, promoting the popularization of automated and intelligent solutions, such as intelligent customer service, autonomous driving and other fields, which are expected to completely change the service model of traditional industries in the future. With the upgrading of consumption and the improvement of living standards, consumers' demand for personalized and immersive experience is growing. This brings huge development opportunities to the human-computer interaction industry. From the perspective of the core market, China's serial port screen market will account for 60.34% of the global market revenue share in 2024, making it one of the world's most important consumer markets, and its growth rate is higher than the world. With the acceleration of product development of Chinese enterprises and the dual drive of new technologies and industrial policies, the Chinese serial port screen market will usher in development opportunities in the future. It is expected that by 2031, the Chinese serial port screen market will grow to 439 million US dollars, with a compound annual growth rate of 5.72% from 2025 to 2031. The market size in the United States in 2024 is 63 million US dollars, and the European market size is 79 million US dollars in the same period. It is expected that the CAGR of these two regions will be 5.31% and 5.26% respectively in the next six years. The serial port screen has a highly customized display function and is suitable for various industries, consumer electronics, medical equipment and other fields. With the advancement of display technology, the resolution, color reproduction and response speed of the serial port screen have been significantly improved. In the future, high-definition display and intelligent processing (such as touch control, remote monitoring, etc.) will become important development directions. Some high-end serial port screens have begun to integrate wireless communication modules, such as Wi-Fi, Bluetooth, etc., to provide more flexible application scenarios. Manufacturers are constantly optimizing interface design, simplifying user operations, and improving product usability. At present, the global market is dominated by Chinese manufacturers. The world's leading human-computer interaction manufacturers mainly include DWIN, Guangzhou Dacai Optoelectronic Technology, Kinseal Intelligent Control Corporation, XRD Electronics, Beijing Stone Technology, Taojingchi, AnHui DJN Optronics Technology, etc. In 2024, the top five manufacturers accounted for 65.87% of the global market revenue share.
