### Report Overview

A servo riveting machine is a type of industrial equipment used for joining components together using rivets. Unlike traditional pneumatic or hydraulic riveting machines, which rely on air or fluid pressure for operation, servo riveting machines utilize servo motors for precise control over the riveting process. These machines typically consist of a servo-driven riveting head, a feeding mechanism for rivets, and a control system. The servo motor allows for precise control over the force, speed, and position of the riveting process, resulting in consistent and high-quality riveted joints.
