Report Overview

Sevelamer Carbonate is a medication used primarily for the treatment of hyperphosphatemia, a condition characterized by elevated levels of phosphorus in the blood. This drug is particularly beneficial for individuals with chronic kidney disease or those undergoing dialysis, as it helps to control phosphorus levels and prevent complications associated with high phosphorus, such as bone disorders and cardiovascular issues. Sevelamer Carbonate works by binding to dietary phosphorus in the gastrointestinal tract, forming a non-absorbable complex that can be excreted through feces. This mechanism reduces the amount of phosphorus absorbed into the bloodstream, thereby lowering serum phosphorus levels. The drug is typically prescribed as a part of a broader treatment plan that includes dietary modifications and, in some cases, other medications to manage phosphorus levels effectively.
