Report Overview

Sevelamer Carbonate Tablets is a pharmaceutical product designed for the treatment of hyperphosphatemia, a condition characterized by elevated levels of phosphorus in the blood. This medication is particularly prescribed for patients with chronic kidney disease (CKD) who are on dialysis, as they are at a higher risk of developing hyperphosphatemia due to their impaired kidney function. Sevelamer Carbonate works by binding to dietary phosphorus in the gastrointestinal tract, thereby reducing its absorption and helping to maintain phosphorus levels within a safe range. The tablets are taken orally and are an important component of managing overall kidney health and preventing complications associated with hyperphosphatemia, such as soft tissue and vascular calcification.
