Report Overview

Ship Shore Charging Equipment (SSCE) refers to the infrastructure and technology used to provide electrical power to electric or hybrid vessels while they are docked at a port or terminal. This equipment facilitates the charging of the ship's batteries or other energy storage systems, ensuring that the vessel has sufficient energy for its next journey. SSCE includes various components such as charging stations, cables, connectors, and control systems that are designed to interface with the ship's power systems. The purpose of SSCE is to reduce emissions and improve energy efficiency by allowing ships to operate on clean electricity during port stays, rather than relying on traditional fossil fuels. It is an essential part of the transition towards greener maritime transport and supports the broader goals of reducing the environmental impact of shipping operations.
