Report Overview

Shot blasting robots are advanced industrial automation machines designed to perform surface treatment processes, specifically shot blasting, on various materials such as metals and alloys. These robots utilize high-pressure air or mechanical force to propel abrasive media, such as steel grit or sand, onto the surface of the material being treated. The primary purpose of shot blasting robots is to remove surface contaminants, oxide layers, and other impurities, while also achieving a uniform surface finish. They are commonly used in industries such as automotive, aerospace, construction, and shipbuilding to improve material durability, corrosion resistance, and adhesion properties for subsequent processes like painting or coating. Shot blasting robots offer numerous benefits, including increased efficiency, reduced labor costs, and improved consistency in surface treatment quality.
