Abstracts

Etching SiC is a particularly challenging process since the material has a hardness approaching that of diamond. It also has a very stable chemical structure. SiC is more difficult to dry etch than some other compound layers e.g. GaAs, AlGaAs, InP, which can be etched in a conventional inductively coupled plasma (ICP) system. This report studies the etching system for SiC devices.

The global SiC Etching Equipment market size was estimated at USD 253.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global SiC Etching Equipment market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
