Report Overview

A common application of silicon carbide sharpening stone is for the sharpening of knives made from hard stainless steel. Silicon carbide sharpening stone cuts aggressively. Usually, silicon carbide stones do come in a coarser grit and are suitable for the initial coarse sharpening. Silicon carbide stones have been shown to have a Mohs Hardness of 9-10. Silicon carbide sharpening stones can be used with either water or oil. Oil stones, for instance, can be made from different types of materials, which are novaculite, aluminum oxide, and silicon carbide, but the fastest cutting oil stones are silicon carbide stones. When using water with the stones, it helps to have some dish soap mixed with it, so it doesn't just soak into the pores immediately.
