Report Overview

Side Entry Ball Valves are a type of quarter-turn rotary valve that is widely used in various industries for controlling the flow of fluids. These valves are characterized by their unique design, where the inlet and outlet ports are positioned on the side of the valve body, as opposed to the top and bottom. This side entry configuration allows for easier installation in tight spaces and facilitates a more compact design. They are typically composed of a spherical valve body, a rotating ball with ports, and a stem that connects the ball to the actuator. The ball has a hole or port that aligns with the flow path when the valve is open, and rotates 90 degrees to shut off the flow when closed. Side Entry Ball Valves are known for their low pressure drop, high flow capacity, and ease of maintenance, making them suitable for applications involving water, oil, gas, and other fluids in both industrial and commercial settings.
