### Report Overview

A Side Track Buffer (STB) is a specialized safety device designed for use in railway and transportation industries. It is strategically placed at the end of a railway track or siding to absorb and dissipate the kinetic energy of a train in the event of an over-run or runaway situation. The STB is engineered to minimize damage to the train, its cargo, and the surrounding infrastructure by providing a controlled deceleration and stopping mechanism. Constructed with robust materials to withstand high impacts, the STB may incorporate features such as crush zones, energy-absorbing materials, or mechanical braking systems to ensure effective train stopping.
