Report Overview

A Silicon Carbide Protective Tube is a type of ceramic tube made from silicon carbide (SiC), a compound composed of silicon and carbon. It is used primarily as a protective housing or sheath for temperature sensors or thermocouples in high-temperature applications. Silicon carbide has excellent thermal conductivity and high-temperature resistance, making it an ideal material for protecting temperature sensors in extreme environments. It can withstand temperatures up to 1650°C (3000°F) in oxidizing atmospheres or even higher temperatures in non-oxidizing or vacuum conditions. The main purpose of a silicon carbide protective tube is to provide a robust and protective barrier around the temperature sensor or thermocouple, shielding it from the harsh operating conditions. It acts as insulation against heat, chemicals, and mechanical stress while allowing accurate temperature measurement.
