Report Overview

Silicone Airway Nasal Splints are medical devices designed to provide support and maintain the patency of the nasal airway. These splints are typically made from soft, flexible silicone material that conforms to the shape of the nostrils, offering a comfortable and secure fit. They are inserted into the nasal passages to help alleviate symptoms of nasal congestion, such as difficulty breathing, snoring, or sleep apnea. Silicone Airway Nasal Splints work by gently expanding the nasal passages, allowing for improved airflow and reducing the reliance on mouth breathing. They are often used as an alternative to traditional nasal strips or as a non-invasive treatment option for individuals with mild to moderate nasal obstructions. These splints are reusable, easy to clean, and can be worn for extended periods, making them a convenient solution for those seeking relief from nasal airway issues.
