Report Overview

A silicone anesthesia mask is a medical device used to administer anesthesia to patients who need to undergo surgery or other medical procedures. The silicone anesthesia mask is worn by the medical staff on the mouth and nose of the patient, and the oxygen and anesthetic drugs are delivered to the patient's respiratory system through the pipeline in the mask, so as to achieve the effect of anesthesia. Compared with traditional gauze masks, silicone anesthesia masks have better sealing performance, which can better prevent impurities in the air from entering the patient's respiratory tract, thus protecting the safety of patients more effectively. At the same time, the silicone anesthesia mask is also more comfortable and can be adjusted to the patient's face shape, thereby reducing discomfort.
