### Report Overview

A Silicone Hydrogel Soft Lens is a type of contact lens made from a silicone hydrogel material, which is a combination of silicone and hydrogel polymers. This advanced material provides a high level of oxygen permeability, allowing more oxygen to reach the cornea compared to traditional hydrogel lenses. The increased oxygen transmission helps reduce the risk of eye complications and enhances overall eye health. Silicone hydrogel lenses are known for their comfort, as they retain moisture and maintain a soft, flexible structure even in dry environments. They are suitable for extended wear and are often recommended for individuals who require high oxygen transmission or who experience discomfort with standard hydrogel lenses. These lenses are designed to correct vision impairments and can be used for daily wear, extended wear, or as a part of a corrective treatment plan under the guidance of an eye care professional.
