Report Overview

Silicone Wire Wound Heater is a type of heating element designed for applications requiring high temperature resistance and flexibility. It is constructed by winding a resistance wire, typically made of materials like nickel-chromium or iron-chromium alloys, onto a silicone rubber-insulated core. This core provides excellent electrical insulation and thermal conductivity, ensuring efficient heat transfer and preventing electrical hazards. The heater is often used in environments with high temperatures, chemicals, or mechanical stress, such as in industrial processes, automotive applications, and aerospace equipment.
