Report Overview

A Single Compression Cable Gland is a specialized electrical accessory designed to secure and protect cables entering or exiting an enclosure, such as a junction box or control panel. It is engineered to provide a watertight and gas-tight seal, ensuring that the integrity of the electrical system is maintained in various environmental conditions. The product is typically made from robust materials like brass, stainless steel, or plastic, and it features a single-entry design for a single cable. The compression mechanism, often involving a gland nut and a sealing ring, is tightened around the cable to create a secure fit, preventing the ingress of moisture and contaminants. This type of cable gland is commonly used in industrial, marine, and outdoor applications where electrical connections need to be protected from the elements and potential damage.
