Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-Direction Thrust Ball Bearing competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Single-Direction Thrust Ball Bearing production reached approximately 4,220 k units with an average global market price of around US\$ 60 per unit, a single-line production capacity of approximately 5,000 units/year, and a gross profit margin of approximately 10%-30%. A single-direction thrust ball bearing is a separable rolling-element bearing designed specifically to support axial loads acting in one direction, while allowing low-friction rotation between a shaft and its housing. The bearing consists of three main components: a shaft washer mounted on the rotating shaft, a housing washer seated in the stationary support, and a ball-and-cage assembly positioned between the two washers. The raceway grooves on each washer are precision-ground to guide a set of hardened steel balls, which are kept evenly spaced by a pressed-steel, machined or polymer cage to reduce friction, control heat generation and promote lubricant distribution. Single-direction thrust ball bearings are explicitly rated for axial (thrust) loads only and must not be subjected to radial loads or combined loads beyond small residual values. Single-direction thrust ball bearings form a key subsegment of the broader thrust ball bearing and axial rolling-bearing markets, serving applications where rotating shafts are subject to predominantly one-way axial loads, including automotive transmissions, machine-tool spindles, industrial gearboxes, screw jacks, pumps, compressors and centrifuges. Growth drivers include ongoing expansion of industrial automation and robotics, rising output of passenger and commercial vehicles, demand for energy-efficient machinery, and life-extension / retrofit programs for legacy industrial equipment. Key trends include integration with condition-monitoring systems, enhanced corrosion-resistant variants for harsh environments, and design

optimization to reduce friction and CO₂ footprint in line with sustainability goals. Overall, the single-direction thrust ball bearing segment is expected to grow broadly in line with the thrust ball bearing market and slightly faster than the overall bearing market, benefiting from its role in many axial-load-critical systems across automotive, industrial and energy sectors.

The global Single-Direction Thrust Ball Bearing market size was estimated at USD 253.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
