Abstracts

A Single-Line Automatic Lubricating System is an efficient and reliable lubrication solution designed to deliver precise amounts of lubricant to multiple machine components through a single supply line. In this system, a central pump delivers lubricant under pressure through a primary supply line, which branches out to various lubrication points equipped with metering devices. These metering devices control the exact amount of lubricant that reaches each component, ensuring consistent and accurate lubrication. The system operates automatically, often controlled by timers or sensors, reducing the need for manual lubrication and minimizing downtime. Single-line automatic lubricating systems are widely used in industrial machinery, automotive production lines, and other applications where regular and precise lubrication is crucial for maintaining the performance, longevity, and efficiency of equipment. This type of system is particularly advantageous in environments where equipment is difficult to access or operates continuously, as it ensures that all components receive the necessary lubrication without interrupting operations.

The global Single Line Automatic Lubricating System market size was estimated at USD 165.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
