### Report Overview

A single-mode dual-core patch cord is a fiber optic patch cord that contains two single-mode optical fibers for bidirectional data transmission. Single-mode optical fibers use a smaller fiber core diameter (usually 8-10 microns) during transmission, enabling long-distance optical signal transmission with lower signal loss. The dual-core design allows one fiber to send signals and the other to receive signals, making it ideal for scenarios that require high bandwidth and bidirectional communication.
