Report Overview

A single output low dropout regulator (LDO) is a linear regulator whose primary function is to reduce the input voltage to the desired output voltage and keep the output voltage stable. The "low dropout" characteristic of an LDO means that the difference between the input voltage and the output voltage can be very small, usually in the range of a few hundred millivolts. For example, if the output voltage is 3.3V, the LDO may allow an input voltage of 3.6V or more.
