The SPAD chip is applied to the receiving system of the laser radar. It is a single-photon avalanche diode operating in the Geiger mode, which converts the photoelectric signal based on the photoelectric effect. When a reverse bias voltage is applied above the breakdown voltage, the carrier generated after the absorption of the incident photon triggers an avalanche driven by a strong electric field.

The global Single Photon Avalanche Diode Spad Chips market size was estimated at USD 385.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
