### Report Overview

Single Side PE Coated Paper is a type of paper product that has undergone a specific manufacturing process to enhance its properties and functionality. This paper is coated with a layer of polyethylene (PE) on one side, which imparts additional characteristics such as water resistance, increased durability, and improved printability. The PE coating serves as a protective barrier and can also facilitate better adhesion for printing inks, making it suitable for various applications like packaging, labels, and graphics. The single-sided application of the coating means that only one surface of the paper is treated, allowing for flexibility in usage where one side may require the enhanced properties while the other side remains untreated for specific purposes, such as writing or adhering to surfaces. This product is valued for its ability to combine the natural qualities of paper with the practical benefits of a plastic coating, offering a versatile solution for a range of commercial and industrial needs.
