Report Overview

Single-use Negative Pressure Wound Therapy (NPWT) dressing is a medical device designed to facilitate wound healing by providing a controlled, sub-atmospheric pressure environment within the wound. This dressing is intended for single patient use, ensuring both safety and hygiene. The NPWT dressing typically consists of a porous foam or gauze pad that is placed directly onto the wound, an adhesive border to secure the dressing to the surrounding skin, and a tube that connects the wound to a vacuum source. The vacuum removes excess fluid, reduces swelling, and promotes the growth of healthy tissue. This advanced wound care solution is particularly beneficial for managing complex wounds, such as those resulting from surgery, trauma, or chronic conditions, by accelerating the healing process and reducing the risk of infection.
