### Report Overview

Sintered silicon carbide (SiC) for oxidation diffusion equipment is a high-performance ceramic material widely used in semiconductor manufacturing due to its exceptional thermal stability, chemical resistance, and mechanical strength. It serves as a critical component in oxidation and diffusion furnaces, where it withstands extreme temperatures (up to 1600°C) and corrosive environments, ensuring minimal contamination and long-term reliability. The material's low thermal expansion coefficient and superior thermal conductivity make it ideal for maintaining process uniformity in wafer fabrication. Demand is driven by the semiconductor industry's expansion, particularly in advanced nodes (e.g., 5nm and below), where precision and material purity are paramount. Key suppliers include Saint-Gobain, CoorsTek, and Morgan Advanced Materials, with Asia-Pacific (especially China and Taiwan) dominating consumption due to concentrated semiconductor production. Innovations focus on enhancing purity and reducing defects to meet evolving industry standards, while pricing remains premium due to complex manufacturing processes. Regulatory pressures for greener production methods and recycling of SiC components are emerging trends.
