Report Overview

A Sleep Apnoea Machine, also known as a Continuous Positive Airway Pressure (CPAP) device, is a medical equipment designed to treat sleep apnea, a sleep disorder characterized by pauses in breathing or periods of shallow breathing during sleep. The machine works by delivering a continuous flow of air through a mask or nosepiece worn by the user, which helps to keep the airway open and prevent the collapse of the throat muscles that can lead to apnea episodes. This non-invasive therapy improves oxygen levels in the blood, reduces snoring, and promotes more restful sleep. Sleep Apnoea Machines are available in various models, with some featuring auto-adjusting pressure settings, heated humidifiers, and integrated data tracking to monitor therapy effectiveness and adjust treatment accordingly.
