Report Overview

A sliding steering shaft, also known as a steering column or steering shaft, is a crucial component in a vehicle's steering system. It is a telescopic, tubular structure that connects the steering wheel to the gearbox or steering box, allowing the driver to control the direction of the vehicle. The sliding feature enables the shaft to extend or retract, providing adjustability for the steering wheel's position to accommodate drivers of different heights and preferences. This design also ensures safety by collapsing during a collision, reducing the risk of injury to the driver. The shaft is typically made of steel or aluminum for strength and durability, and it may incorporate universal joints to allow for flexibility in movement while maintaining a secure connection between the steering wheel and the gearbox.
